

VG SHARK FIN ANTENNA INSTALLATION INSTRUCTIONS

Your VG Shark Fin Antenna comes with the following items:

1. VG Shark Fin Antenna shell paint matched to the color code of your car
2. Pre-installed 3M custom double-sided adhesive gasket
3. Pre-installed Fractal antenna with coiled cord attachment
4. M5 & M6 attachment screws

You will need following items for installation:

1. Flat head screw driver
2. Painters tape / masking tape
3. Rubbing alcohol (Isopropyl)
4. 3M™ General Purpose Adhesive Cleaner or 3M™ Prep Solvent 70 or Dawn (liquid dish soap) if your car is waxed
5. Hair dryer (do not use a heat gun)

Installation Procedure: PLEASE READ THOROUGHLY AND IN ENTIRETY BEFORE STARTING!

1. Twist to remove the existing whip antenna and preform a test fit for reception and to ensure proper fitment and clearance of any spoilers, opened hatches and trunk lids.
2. Wipe your car around the antenna-base area with rubbing alcohol (Isopropyl). If your car is waxed, clean the area with 3M™ General Purpose Adhesive Cleaner or 3M™ Prep Solvent 70. As an alternative, you may also use a few drops of Dawn (liquid dish soap). Wipe the area again with rubbing alcohol and let it dry. Make sure there is no dirt, dust or any left over residue from your wash materials.
3. Place the VG Shark Fin Antenna over top of antenna base and visually align to where you want it to be; making sure that the gasket is not touching any part of the antenna base.
4. Take a piece of masking tape and place it immediately in front of shark fin (aligning forwards-backwards).
5. Take two pieces of masking tape and while making sure the shark fin is still aligned, place a piece of tape immediately left of the shark fin. Place the other piece of tape immediately right of the shark fin (aligning left-right).
6. The backing paper is pre-slit. Slowly and carefully peel away a portion of the backing paper from slit. Make sure not to damage the adhesive foam gasket and not to touch the bottom of the adhesive with your fingers or you may leave a film of oil prevent proper adhesion.
7. Using the appropriate size mounting screw provided, mount the coiled cord to the rear-roof antenna base; do not over-tighten. Point the barrel of the ring connector downwards to ensure clearance.
8. If the roof of your car is not around room temperature, take the hair dryer and heat up the roof around antenna base (without this step, the adhesive will not bond properly). Make sure to move the hair dryer around and not stay in one spot so you do not damage your paint.
9. When the roof is about room temperature, remove adhesive backing completely.
10. Visually align the VG Shark Fin Antenna to the piece of masking tape in the front. Then visually align shark fin between the two sides pieces of masking tape (do not press down yet). We recommend having another person checking the alignment for you from the back.
11. When you have double checked that you are aligned, press the front of the shark fin down and hold firmly for 1 minute (the adhesive is pressure sensitive).
12. With the front of VG shark fin antenna already mounted, press the rear of the antenna down and hold firmly for 1 minute.
13. Remove masking tape. Installation completed! Congratulations!
14. Let the VG Shark Fin sit for at least a week before going through a car wash.

Please visit our website at www.visualgarage.com.com for sample installation pictures! We would love for you to submit pictures of your car to us at sales@visualgarage.com!

Thank You for your order!
